

Transformative Technology Commercial Banking Coverage & Credit Strategy

Executive portfolio simulation for a technology-focused middle-market banking team

Flagship client: AetherGrid Systems

Portfolio prioritization • Financial statement analysis • Credit screening • Treasury & FX • Relationship review

All companies and financial data are fictional and created for portfolio demonstration.

What the Project Simulates

Designed around the responsibilities of a technology commercial-banking associate

Commercial Associate Workflow Simulated in This Project

- Coverage-level prioritization across clients and prospects
- Company-level financial, credit, treasury, and relationship analysis
- Executive recommendation translated into a relationship-manager workplan

Market & Coverage Context

Public context informs the simulation; all model data remain synthetic

GCB client revenue range

\$50MM–\$2B

Fed funds target

3.50%–3.75%

Portfolio companies

12

Synthetic portfolio revenue

\$5.6B

- Technology coverage requires combining company analysis with access to Credit, Treasury, FX, Investment Banking, Merchant Services, and other partners.
- The model uses a 3.65% illustrative reference rate for the base case, inside the current Federal Reserve target range.
- Portfolio companies span cloud, cybersecurity, fintech infrastructure, AI data, SaaS, healthcare technology, and network software.

- The portfolio score separates credit strength from relationship opportunity.
- The flagship case tests whether growth, margin expansion, and cash generation remain sufficient under a slower-growth / higher-rate downside.
- Treasury analysis focuses on collections, payments, liquidity, and international FX needs.

Technology Portfolio Prioritization

Credit quality and relationship opportunity are evaluated separately before combining into coverage priority

Coverage Takeaways

- AtlasEdge and QuantumRoute rank highest overall because of strong financial profiles and larger relationship wallets.
- CipherNorth screens as the strongest high-growth prospect from a credit perspective.
- VectorMesh AI demonstrates why exceptional growth does not automatically equal bankable credit quality.
- AetherGrid is an existing client with a solid credit screen but meaningful room to deepen the wallet.

Flagship Client: AetherGrid Systems

Existing cloud / AI observability client selected for full relationship review

2025 Revenue	2025 EBITDA Margin	2025 Cash	2025 Debt	2025 Net Leverage	NRR
\$255MM	12.9%	\$48MM	\$80MM	1.0x	112%

- Revenue expands while EBITDA margin improves, creating stronger internal cash generation.
- Debt declines and cash increases, reducing net leverage.
- Recurring-revenue retention remains strong, though the forecast assumes gradual normalization.
- International revenue increases, expanding treasury and FX complexity.

Credit Analysis & Downside Resilience

The key question is not whether AetherGrid grows—it is whether cash flow can service debt when growth slows

- Base case shows comfortable coverage and continued deleveraging.
- Downside 2026E is the critical watch point: 1.29x DSCR leaves only modest cushion.
- Higher rates and margin compression matter more than revenue growth alone.
- Preliminary view: maintain revolver flexibility, but avoid aggressive incremental term leverage.

Treasury, Payments & FX Opportunity

A commercial relationship should be evaluated as more than a loan

AetherGrid Treasury Activity: Where Product Opportunities Concentrate

Priority Solution Areas

- Receivables / ACH automation as collections scale
- Operating deposits and liquidity structure as cash balances rise
- Global payment visibility as international revenue expands
- FX exposure review and hedging discussion
- Payment controls for growing vendor disbursements
- Commercial card / expense management for a scaling workforce

Commercial thesis: deepen operating flows and visibility before adding material leverage.

Executive Relationship Review

Translate analysis into coordinated actions across coverage and product partners

Finding	Implication	Action
Improving leverage & cash flow	Credit is supportive but still sensitive to downside	Maintain revolver; limit incremental term debt
Rising collections & cash	Treasury wallet is underpenetrated	Map receivables, payments, liquidity and controls
International revenue rising	FX complexity increases with growth	Conduct exposure review by currency / market
Strong NRR but normalizing	Renewal quality remains a key risk indicator	Review customer concentration and renewal pipeline
Potential future M&A	Strategic-capital needs may emerge	Keep Investment Banking informed

Recommended Coverage Plan

The recommendation balances growth support, risk discipline, and relationship expansion

Preliminary Recommendation

Support continued access to an illustrative \$50MM revolving facility, subject to formal underwriting and approval; prioritize treasury, liquidity, and FX expansion before adding aggressive incremental term leverage.

1 CFO / Treasurer Review

Validate 2026 plan, cash priorities, renewal quality, and capital needs.

2 Credit Refresh

Update downside sensitivities, customer concentration, debt schedule, and liquidity.

3 Treasury / FX Mapping

Map collections, payments, deposits, international flows, and policy gaps.

4 Quarterly Monitoring

Track DSCR, NRR, cash, leverage, margin execution, and wallet penetration.

What This Project Demonstrates

Financial Analysis

Three-year forecast, margins, working capital, liquidity and cash flow

Commercial Credit

Net leverage, DSCR, interest-rate sensitivity and downside screening

Technology Coverage

SaaS / recurring revenue, NRR, growth and operating leverage

Treasury & FX

Collections, payments, deposits, liquidity and international exposure

Client Strategy

Relationship prioritization, needs assessment and product opportunity mapping

Executive Communication

Dashboard, credit screening memo, relationship review and pitch deck
